

Kerrio.AI User Journey

A Definitive Guideline for Purpose, Structure, and Differentiation

Rough Mock-up 'Idea' of 3rd part of the User Journey

1 Introduction: Why Kerrio Exists

Kerrio.AI is designed as a **digital twin of Dr Kerry Spackman**, replicating the way he works with ultra-high-net-worth (UHNW) and elite-performance clients. Its purpose is not motivation, engagement, or “coaching conversations”. Its purpose is **permanent human optimisation**, grounded in neuroscience, psychology, and lived clinical-grade practice.

To clearly define the Kerrio user journey, I deliberately draw an analogy with **Mayo Clinic**, widely regarded as the world’s #1 medical institution. Mayo Clinic is not famous for novel treatments or technology; it is famous for **diagnostic excellence**.

Accurate diagnosis is the foundation of effective treatment.
Without diagnosis, intervention is guesswork.

Kerrio applies this same principle to **human performance, cognition, and psychology**.

Unlike typical AI coach chatbots — which function as question-answering tools or gamified motivation systems, Kerrio is designed to **change the person**, not merely prompt behaviour.

Kerrio builds **intrinsic motivation** by removing hidden cognitive constraints through **diagnosis and cognitive rewiring**,

This includes:

- Building a **full Cognitive Wiring Map** (a personalised brain model) for each client during diagnosis
- Using **Patent Pending Cognitive Rewiring Maps** as part of treatment

The result is **lasting internal change**, not dependence on external rewards.

2 The Mayo Clinic Patient Journey (Reference Model)

The Mayo Clinic process is deliberately patient-centred and diagnostic-first:

1. **Registration**
The patient registers as a verified client.
2. **Examinations & Tests**
Comprehensive diagnostics (MRI, blood tests, X-rays, physiological measures).
3. **Clinician Consultation**
The clinician reviews all test data and explores the patient's lived experience.
4. **Diagnosis**
The clinician determines *what is actually going on* and explains it clearly.
5. **Treatment Proposal**
A customised treatment plan is proposed, grounded in diagnosis.
6. **Treatment Commencement**
Treatment begins in a structured, deliberate manner.
7. **Monitoring & Progress Assessment**
Progress is monitored and reassessed over time.

Key insight:

Mayo Clinic's reputation rests on **understanding before intervention**.

3 The Kerrio.AI Client Journey (Digital Cognitive Clinic)

Kerrio translates this medical model into a **digital, neuroscience-driven cognitive optimisation system**.

1. Registration (Validation as Invited Guest)

Clients register on the Kerrio.AI platform and are validated as **invited guests**.

This step:

- Establishes seriousness and exclusivity
- Filters for high-intent clients
- Sets expectations that Kerrio is not a mass-market app

This mirrors Mayo's secure registration, adapted for UHNW clients.

2. Detailed History (Raw Data Across Three Pillars)

Clients provide a comprehensive personal history across three pillars:

1. **History** – life events, formative experiences, patterns
2. **Psychology & Philosophy** – beliefs, values, meaning structures, emotional wiring
3. **Physiology** – sleep, stress, health, energy, constraints

This is **not a questionnaire**.

It is a guided, narrative-rich process that provides the raw data for diagnosis — the **cognitive equivalent of a brain MRI**.

This history forms the foundation for the client's **Cognitive Wiring Map**.

3. Consultation with Digital Twin (Clinician's Notes)

The client enters a consultation phase with **Kerrio**, the digital twin of Dr Kerry Spackman.

Through structured interaction:

- Ambiguities are clarified
- Blind spots are uncovered
- Patterns emerge that static history alone cannot reveal

Critically:

- **Client History** and **Clinician's Notes** are maintained separately
- Any new insights uncovered are:
 - Explained to the client
 - Added back into the formal history
 - Used to refine the diagnostic model

This mirrors real clinical practice and preserves diagnostic integrity.

4. Diagnosis & Explanation (Education Before Intervention)

Kerrio now performs the **diagnostic step** — the most important phase of the entire journey.

This includes:

- Identifying core constraints and bottlenecks
- Constructing a **full Cognitive Wiring Map** (a personalised brain model unique to the client)
- Explaining *why* the problem exists, not just *what* it looks like

As part of diagnosis, clients are directed to **highly targeted, pre-recorded videos** prepared by Dr Spackman. These explain:

- The relevant neuroscience
- The mechanisms maintaining the problem
- Why specific interventions will work

Understanding is a prerequisite for permanent change.

Clients do not proceed until diagnosis is understood.

5. Treatment Proposal

Only once the client understands:

- Their diagnosis
- The neuroscience behind it
- The logic of change

...does Kerrio propose a treatment process.

This plan is:

- Personalised to the Cognitive Wiring Map
- Anchored in TWF
- Structured, sequenced, and deliberate

There is no generic “coaching advice”.

6. Treatment Commencement

Treatment begins using **neuroscience-based interventions**, including:

- **Patent Pending Cognitive Rewiring Maps**
- Structured cognitive and behavioural recalibration
- Targeted psychological rewiring

The goal is **structural change**, not motivational compliance.

7. Monitoring & Progress Assessment

Clients are monitored longitudinally.

Progress is assessed against:

- The original Cognitive Wiring Map
- The original constraints
- Performance and wellbeing indicators

Maps are updated, interventions refined, and progress reassessed — closing the clinical loop:

Diagnosis → Treatment → Reassessment

4 Why Kerrio Is Fundamentally Different from AI Coach Chatbots

4.1 Diagnostics First

- Chatbots respond to questions. Kerrio **builds a model of the person**.
- Without diagnosis, interventions are generic. Kerrio’s Cognitive Wiring Map is the foundation of everything that follows.

4.2 Intrinsic, Not Extrinsic Motivation

Gamified systems rely on:

- Tokens
- Badges
- Points
- Streaks

These create **temporary extrinsic motivation**.

Kerrio removes the internal constraints that make motivation necessary, allowing **intrinsic motivation to emerge naturally**.

4.3 Depth and Continuity

Chatbots are reactive and episodic.

Kerrio is:

- Cumulative
- Longitudinal
- Clinically coherent

The client's model evolves over time.

4.4 Exclusivity and Expertise

Kerrio embodies **Dr Spackman's proven elite-performance methodology**, not generic AI patterns.

The **Patent Pending Cognitive Rewiring Maps** provide a defensible moat that generic AI coaching systems cannot replicate.

5 Final Positioning Statement

Kerrio AI is designed to **change the person permanently** by diagnosing and removing the hidden constraints that limit performance, clarity, and fulfilment.

Kerrio is a digital cognitive clinic — not a chatbot.
